Messaging app Telegram has been banned in Iran after it was deemed a 'national security concern' by the Iranian Government.

According to Li Kaifu, CEO of technology investment firm Sinovation Ventures, China is likely to overtake the United States in several key areas of artificial intelligence in the next five years.

According to a new report by the British Israel Communications and Research center the top four British banks are getting security expertise and advice from Israeli cybersecurity companies.

Australia and Portugal have decided to join NATO's Cyber Cooperative Defence Centre of Excellence, a group which is designed to coordinate international cybersecurity efforts.

The UK Government has been given six months to rewrite the Investigatory Power Act 2016 after key parts of the law known as the Snoopers’ charter were deemed unlawful by the high court. If passed telephone and internet companies would have been forced to record their customers phone activity including location and browsing history for the Government to access.

The European Commission have announced an extra €1.5bn for Artificial Intelligence funding which will be used to develop AI in key sectors including transport and health.

Legislation in the United States if passed would allow technology companies and individuals to take ‘active defence measures’ to protect their systems from cyberattacks. This could grant companies and citizens the legal right to hack into other networks to protect their own.

A US Democrat on the Appropriations Committee has urged for more clarity on the Department of Homeland Security's cyber mission to secure federal networks and critical infrastructure from hackers after growing concerns the department lacks the resources to make the US cyber resilient.
Thousands of protesters took to the streets chucking paper plans to send a message to the **Russian Government** that blocking messaging service **Telegram** app was not acceptable.

According to **cybersecurity** firm **McAfee** a suspected **North Korean** hacking group has expanded its reach to seventeen different countries including the **United States**, crippling infrastructure, telecommunications and entertainment organisations.

The **Australian Government** have set aside A$70 Million to replace two **supercomputers** in a bid to better the countries research capabilities.
