A new report from the European Parliament’s Civil Liberties Committee has called for the introduction of shared best practices across the EU for member states to circumvent the encryption of mobile messaging apps as well as protect critical infrastructure.

Germany became the first EU country to implement the General Data Protection Regulation (GDPR), ahead of the official implementation date next year. In the UK the House of Lords will shortly publish a new report on the impact that Brexit will play on the UK’s implementation of GDPR.

A new report from the Electronic Frontier Foundation has found that messaging app WhatsApp continually falls short in protecting user data. While WhatsApp was singled out specifically, the Foundation found that in general companies are more active in protecting the privacy of their users.

The Russian Government have confirmed that at last week’s G20 meeting in Hamburg Donald Trump and Vladimir Putin did in fact discuss a potential joint cybersecurity unit. President Trump had publicly denounced any plans prior to the statement from Russia.

The US Department of Defense announced plans to implement new encryption procedures to protect the email accounts of its armed forces personnel.

President Trump’s nomination for the vacant role of FBI Director Chris Wray has come under industry scrutiny for his positions on encryption and other data privacy issues.

The Government of Singapore’s Ministry of Communications and Information and the country’s Cybersecurity Agency have launched a public consultation ahead of the introduction of a new cybersecurity bill.
The Chinese government has promised to not disrupt the legitimate use of the internet by its citizens following recent moves to end the use of Virtual Private Networks on mobile and traditional platforms.

ICANN extended the deadline for their consultation on the organization of the group’s Root Server System Advisory Committee to 24 July 2017.

MEPs push cyber security rules as ‘political message’ before EU overhaul

A new report from the European Parliament’s Civil Liberties Committee has called for the introduction of shared best practises across the EU for member states to circumvent the encryption of mobile messaging apps as well as protect critical infrastructure.

“MEPs are pressuring the European Commission to propose new cyber crime rules on hacking vulnerabilities, encryption and information sharing between EU countries, ahead of a legal overhaul planned for September.

Member states should exchange “best practices” about circumventing encryption and invest more to protect critical infrastructure like energy and transport networks from cybersecurity attacks, according to a report that passed Tuesday (11 July) in the European Parliament’s Civil Liberties Committee (LIBE).”

Rise in use of biometrics products for cyber-security, report predicts

A new study has found that companies are increasingly turning to biometric products to help them overcome the risks of cybersecurity.

“A new report is predicting a significant rise in the use of biometric products, as organisations look to prevent fraud and protect their estate from organised cyber-crime groups.

Fraud, as the report highlights, is a serious problem. In the 2016 Cyber Security Breaches Survey published by the UK government, 65 percent of large firms in the UK detected a cyber-security breach or attack in the past year.”

**German military aviation command launches cyber threat initiative**

The German Military’s aviation command is set to implement a new cybersecurity initiative to protect the country’s military aircraft from any future threat of cyberattacks.

“The German military’s aviation safety chief has launched a new initiative against cyber threats, citing research that he said shows hackers can commandeer military airplanes with the help of equipment that costs about 5,000 euros ($5,700).

A defense ministry spokesman told Reuters that development of new "aviation cyber expertise” would cover everything from raising consciousness about cyber threats to technical research projects and equipping aircraft with protective systems.”

**Cybersecurity startups urged to join GCHQ Cyber Accelerator**

The UK’s digital espionage service GCHQ is to launch a second iteration of its cyber accelerator programme, designed to support UK based cybersecurity entrepreneurs in the establishment of new cybersecurity startups.

“The UK government has announced a second cyber accelerator programme aimed at helping UK startups take the lead in producing the next generation of cyber security systems.

Cutting-edge cyber security entrepreneurs and startup firms can [apply to join](#) the second programme in the GCHQ Cyber Accelerator, which will be extended from three to nine months.”

House of Lords to report on post-Brexit GDPR, Germany first to enact GDPR

Germany has become the first EU country to implement the General Data Protection Regulation (GDPR), ahead of the official implementation date next year. In the UK the House of Lords will shortly publish a new report on the impact that Brexit will play on the UK’s implementation of GDPR.

“The House of Lords has announced it is about to release a report on what post-Brexit GDPR might look like.

Called Brexit: the EU data protection package, the report was written by the EU Home Affairs Sub-Committee and explores the implications of Brexit for maintaining unhindered cross-border data flows between the UK and the EU.”

WhatsApp is falling short in keeping people’s messages private, says pressure group Electronic Frontier Foundation

A new report from the Electronic Frontier Foundation has found that messaging app WhatsApp continually fall short in protecting user data. Whilst WhatsApp was singled out specifically, the Foundation found that in general companies are more active in protecting the privacy of their users.

“WhatsApp’s users are not being kept safe properly, according to a major new report.

Pressure group the Electronic Frontier Foundation has released its rankings of how tech companies are keeping their users’ data secure and private. And the popular chat app was singled out for specific criticism for potentially letting governments look at people’s private messages.”

Russia confirms Putin-Trump talk on joint cyber unit

The Russian Government have confirmed that at last week’s G20 meeting in Hamburg Donald Trump and Vladimir Putin did in fact discuss a potential joint cybersecurity unit. President Trump had publicly denounced any plans prior to the statement from Russia.

“Russia confirmed on Monday that Donald Trump and Vladimir Putin had discussed forming a joint Russian-U.S. group on cyber security, an idea that has provoked uproar in Washington, but said it was only a tentative proposal.

Trump said on Twitter early on Sunday the two leaders discussed forming "an impenetrable Cyber Security unit" when they met at the Hamburg G20 summit.”

FBI warns of attempts to hack nuclear power plants

A joint FBI and Department of Homeland Security report has revealed the extent of malware and other cyberattacks on US critical nuclear infrastructure and the methods used to target both equipment and personnel.

“The Department of Homeland Security and FBI have issued a joint report providing details of malware attacks targeting employees of companies that operate nuclear power plants in the US, including the Wolf Creek Nuclear Operating Corporation, The New York Times reports. The attacks have been taking place since May, as detailed in the report issued by federal officials last week and sent out to industry.”

One in four will consider not voting in elections due to cybersecurity

A new poll by Carbon Black has found that almost a quarter of US voters will potentially abstain from voting due to cybersecurity concerns. The poll noted a 7% increase on the number of people who felt that cybersecurity issues could lead them to not vote compared to a previous poll in September.

“One in four American voters say they will consider not voting in upcoming elections due to concerns over cybersecurity, according to a new poll conducted by a cybersecurity firm.

The 27 percent of voters who agreed with that statement mark a 7 percent rise over a similar poll conducted in September.”

**Facebook, Twitter and Microsoft pushing back against gov surveillance gag orders**

Major digital companies such as Facebook, Microsoft and Twitter have started to conduct significant legal battles with the US government to increase the amount of publicly available data relating to the security requests of espionage and law enforcement agencies and their impact on personal data protection.

*“Facebook, Twitter and Microsoft among other tech firms are engaging in legal battles concerning government surveillance and the gag orders that prevent full disclosure of information requests.*

*U.S. District Judge Yvonne Gonzalez Rogers ruled Thursday in an Oakland courtroom that the US government failed to show the kind of “clear and present danger” that could justify restricting Twitter’s constitutional rights to disclose information about its surveillance requests, however the Justice Department is reviewing the ruling.”*

**Microsoft to Propose Plan to Bridge Digital Divide in Rural U.S.**

Technology company Microsoft announced plans to utilize TV spectrums to help improve the availability of internet connection to those living in rural parts of the United States.

“**Microsoft** plans to push TV spectrum for providing Internet connectivity to rural America. Microsoft president Brad Smith is set to outline the program Tuesday in Washington D.C., according to various reports.

The company has long pushed for the use of white spaces, a term referring to unlicensed spectrum between broadcast channels to bring the Internet to underserved communities, notably in Africa. Now the company wants to apply that technology closer to home, according to **Bloomberg** which reported that the company hopes to bring fast Internet to 2 million Americans over the next five years, with funding focusing on 12 rural states.”
Tech firms unite for 'net neutrality' protest

Major internet companies are joining with internet access advocacy groups to protest the FCC’s decision to reverse net neutrality regulations introduced during the Obama administration.

“A host of internet giants - from social networks to dating apps to porn sites - will join a protest Wednesday against plans to roll back rules protecting "net neutrality"." 

The sites will display a variety of messages, or simulate the potential effects of losing the basic principle of all internet traffic being treated equally."

**China orders mobile carriers to disallow access to virtual private networks**

The Chinese government has promised to not disrupt the legitimate use of the internet by its citizens following recent moves to end the use of Virtual Private Networks on mobile and traditional platforms.

“VPNs, or virtual private networks that route traffic to servers in other countries, enjoy outsie popularity in China, where tens of millions of people use them to skirt the country’s internet restrictions. But on Monday, July 10, the government took steps to curtail the use of VPNs among the country’s smartphone users by instructing mobile carriers to block access to private networks by February 1.

*This move is in keeping with Chinese President Xi Jinping’s “cyber sovereignty” campaign, a 14-month effort to clamp down on loopholes around China’s internet restrictions. Earlier this year, China’s Ministry of Industry and Information Technology pledged to step up enforcement against unauthorized VPNs, and forced at least one popular company, GreenVPN, to halt service in mainland China.”*

Bloomberg

**China Says It Will Not Disrupt Legitimate Internet Access**

The Chinese government has promised to not disrupt the legitimate use of the internet by its citizens following recent moves to end the use of Virtual Private Networks on mobile and traditional platforms.

“A Chinese ministry said it will not disrupt legitimate access to the global internet by businesses and general users, after a Bloomberg report it had ordered telecommunications carriers to bar individuals from using services to circumvent its Great Firewall.

The Ministry of Industry and Information Technology’s existing notice governing the use of virtual private networks, issued January, should not affect activities of local and foreign businesses or users in general, it said in an emailed statement.”
Maharashtra government delivers free Wi-Fi to Mumbai

India’s state owned communications company Maharashtra Information Technology Corporation is to partner with Fortinet to provide free WiFi access to citizens in Mumbai.

“Government-owned Maharashtra Information Technology Corporation (MITC) has chosen Fortinet to provide wireless internet access to Mumbai, India.

The government has deployed Fortinet indoor and outdoor access points in more than 500 locations in the city for the first phase of the Wi-Fi project. The access points have omnidirectional antennas, wireless controllers, and a wireless manager to enable scaling, voice mobility and provide high performance.”
