Synopsis

Scroll to read full summaries with links to news articles.

A security expert from Belgian university KU Leuven, Mathy Vanhoef, has found a security flaw that leaves nearly all devices that support WI-FI vulnerable to hacking. Cybersecurity teams across the world are examining these vulnerabilities.

The UK and Canada have committed to working collaboratively to strengthen digital government developments in both countries. They plan to provide better services, teach children how to code, share information and promote open data and standards to tackle issues of cybersecurity.

Following a review of the EU-US Privacy Shield, the European Commission has stated that whilst the agreement had “ensured adequate protection and safeguards” it had identified eight areas in which the data sharing agreement could improve.

A coalition of 40 organisations including, the American Civil Liberties Union NAACP and the Freedom of the Press Foundation, told the House Judiciary Committee that it is opposing the USA Liberty Act. These groups believe that the act would give the USA too much power to gather data on innocent Americans without a warrant.

Kaspersky Lab and Interpol signed a cybersecurity sharing agreement last Thursday to strengthen their relationship. Kaspersky hopes this will rehabilitate their reputation with the United States after they decided to ban the company’s security products last September.

Tech Central has discovered personal information online relating to the unique ID numbers, income and employment history of some 30 million South Africans. It is suspected that the data belonged to the government at one point however this has not yet been confirmed.

The Australian Cyber Security Centre’s 2017 Threat Report has confirmed that Australian companies continue to see a rise in cyberattacks, with a rise in Phishing attacks, highlighting the need for companies to build cybersecurity into
supply chain contracts and for businesses to be more open about cyber incidents.

Memorandum of understanding between Canada and United Kingdom

The UK and Canada have committed to working collaboratively to strengthen digital government developments in both countries. They plan to provide better services, teach children how to code, share information and promote open data and standards to tackle issues of cyber security.

“The UK and Canadian Governments have signed a Memorandum of Understanding (MOU) relating to each nation’s ambitions for Digital Government.”

London issues call to arms to cyber security community

The London Digital Security Centre met with small businesses last Thursday to call for cooperation on cyber-crime, as often SME’s have fewer resources to protect themselves against hackers.

“London is calling on the cyber security community to help keep the city’s more than one million small businesses safe from cyber-crime.”

“Cyber-crime is a growing problem for everyone, but while individuals are protected by their banks, small businesses can be sunk if their [banking] details are hacked,” said Rebecca Lawrence, chief executive, Mayor’s Office for Policing and Crime.

‘All Wi-Fi networks’ are vulnerable to hacking, security expert discovers.

A security expert from Belgian university KU Leuven, Mathy Vanhoef has found a security flaw, which leaves nearly all devices that support WI-FI vulnerable to hacking. Cybersecurity teams across the world are examining these vulnerabilities.

“The security protocol used to protect the vast majority of WIFI connections has been broken, potentially exposing wireless internet traffic to malicious eavesdroppers and attacks, according to the researcher who discovered the weakness.”

Iran is being blamed for a cyber-attack against Parliamentary emails

The 9,000 UK Parliamentary email accounts that were hacked earlier this year are now being blamed on Iran, making this the countries first major cyber-attack against the UK.

“The 23 June 12-hour brute force hack-attack against 9,000 parliamentary email accounts, including minsters and the PM, is now being blamed on Iran.”

“If correct, this unpublished assessment by British intelligence reported in the Times and claimed to be independently verified by The Guardian, would be Iran's first significant act of cyber-warfare against the UK – disclosed at a time when the UK is opposing Trump moves to rescind an agreement to drop sanctions against Iran if it ceased nuclear arms development.”

Defence Minister says Poland fended off Russian cyber- attack on business

Polish Defence Minister, Antoni Macierewicz, has announced that Poland successfully blocked another cyber-attack from Russia after hackers attempted to infiltrate businesses in the Ukraine and Poland.
“Less than two weeks after news surfaced of Russian hackers accessing the phones of 4,000 NATO troops in Poland and other European nations, Poland’s defence minister reportedly disclosed that his country successfully stopped yet another Russian cyber-attack.”

**Homes and Communities Agency breach reported to ICO**

The Homes and Communities Government Agency has notified the Information Commissioner's Office (ICO) that there has been a minor breach of its information security policy. Government agencies are becoming more active in reporting limited breaches to the ICO ahead of the introduction of GDPR next year.

“No doubt getting itself ready for the 72-hour breach reporting requirements of GDPR, on Wednesday 11 October the UK government agency, the Homes and Communities agency, reported that it has notified the Information Commissioner's Office of a limited breach of its information security policy on Monday 9 October.”

**Dutch Privacy Regulator says Windows 10 breaks the law**

The Dutch Data Protection Authority has announced that Microsoft’s Windows 10 system breaches Dutch law as a lack of transparency in how Microsoft uses data collected from Windows 10 means that consumers are prevented from giving their informed consent.

“To comply with the law, the DPA says that Microsoft needs to get valid user consent: this means the company must be clearer about what data is collected and how that data is processed. The regulator also complains that the Windows 10 Creators Update doesn’t always respect previously chosen settings about data collection.”

Data protection and digital single market struggle to combine in Europe

EU Director General for Justice, Tiina Astola has argued that the introduction of GDPR in 2018 will make the EU the world leader on digital privacy issues.

“Despite a growing number of cyber-attacks in Europe and the increased use of the Internet by criminal and terrorist groups, Tiina Astola, head of DG Justice, delivered a positive message during the fourth Congress of European Notaries in Santiago de Compostela.

“The new EU law on data protection that will enter into force in May 2018 is highly advanced. We are at the forefront of data protection in Europe. We did a lot of work to get here,” she said.”

EU-US Privacy Shield data pact is working but needs improvement, says EC

Following a review of the EU-US Privacy Shield, the European Commission has stated that whilst the agreement had “ensured adequate protection and safeguards” it had identified eight areas in which the data sharing agreement could improve.

“After one year of operation, the EU-US data transfer deal Privacy Shield is “working well” but has a lot of “room for improvement”, says the European Commission (EC).

More than 2,400 companies are signed up to the voluntary agreement that safeguards the privacy rights of Europeans when their data is transferred to the US. The deal was drawn up after the European Court of Justice did away with the previous Safe Harbour agreement following the Edward Snowden revelations about security services' data gathering.”
Government launches £25m trial fund to develop UK 5G industry

The Department for Digital, Culture, Media and Sport has awarded £25m of the National Productivity Investment fund to develop 5G mobile technology and position the UK as a leader in the technology.

“The Department for Digital, Culture, Media and Sport (DCMS) is inviting interested parties from around the UK to apply for match-funded grants out of a £25m funding pot to develop and test 5G mobile network technology and help cement the country’s position as a leader in 5G.”

Google to offer enhanced Gmail security to journalists, government officials

Google announced last week that it is creating stronger security protections for journalists and government officials who are more vulnerable to attacks. Once they have signed up to the Advanced Protection Program their accounts will be updated continuously to deal with vulnerabilities.

“Google announced Tuesday that it’s rolling out new, stronger security protections for a small set of users, such as journalists and government officials, who face a higher risk of being targeted by hackers.”

“The protections are a part of a new Advanced Protection Program, which provides what Google says are its strongest security features. Once users sign up for the program, their accounts’ security will be continuously updated by Google as it patches different vulnerabilities and beefs up its cybersecurity.”

Equifax website hacked again, this time to redirect to fake Flash update

Equifax’s website has been targeted again with hackers directing customers to install fake updates to their Flash software.

“In May credit reporting service Equifax's website was breached by attackers who eventually made off with Social Security numbers, names, and a dizzying amount of other details for some 145.5 million US consumers.

“For several hours on Wednesday, and again early Thursday morning, the site was maliciously manipulated again, this time to deliver fraudulent Adobe Flash updates, which when clicked, infected visitors’ computers with adware that was detected by only three of 65 antivirus providers.”

**Pizza Hut data breach shows need for board control**

Pizza Hut failed to notify their customers that personal credit card details had been compromised for over two weeks. 60,000 US customers names, postcodes, delivery addresses, payment card information was all hacked.

“Pizza Hut has come under fire for failing to notify affected customers for two weeks after discovering a data breach that exposed credit card details.”

“Affected customers took to Twitter to complain about the delay in notification, with some reporting fraudulent card transactions that may be linked to the breach.”
EU-US Privacy Shield data pact is working but needs improvement, says EC

Following a review of the EU-US Privacy Shield, the European Commission has stated that whilst the agreement had “ensured adequate protection and safeguards” it had identified eight areas in which the data sharing agreement could improve.

“After one year of operation, the EU-US data transfer deal Privacy Shield is “working well” but has a lot of “room for improvement”, says the European Commission (EC).
