A new EU framework will allow members to decipher and declare certain cyber-attacks as acts of war, justifying a response with conventional weapons.

The National Audit Office has published a report investigating the NHS’s response to the WannaCry cyber-attack. The report concluded that the attack was, “relatively unsophisticated” but that poor management and communication within the NHS meant that the extent of damage and disruption could have been prevented.

Members of the European Parliament have agreed to include a human rights safeguard clause as part of a new technology exports bill, which if passed will make it harder for companies to export digital surveillance technology to other regions.

House and Senate Democrats are to introduce new legislation calling on the Department of Commerce to open a voluntary programme to evaluate and certify manufacturers products for cybersecurity credibility. The Department would also produce recommendations on cybersecurity benchmarks.

Following recent meetings between agencies it was announced that Kaspersky anti-virus software was not as deeply widespread in government as was feared. A Homeland Security official did not give a figure or percentage on the number of agencies using the software but stated that it was lower than 50%.

The Senate Intelligence Committee has ratified the reauthorisation of Section 702 of the Foreign Intelligence Surveillance Act, the vote will allow the US government to continue to monitor and extract internet and telecom communications both within the USA and beyond for the next eight years. Civil liberties groups have expressed their outrage that the vote was decided during a private session.
North Korea have lambasted claims that they were responsible for the global WannaCry ransomware attack, as a gross distortion of truth. They see it as a "wicked attempt" to increase international sanctions on Pyongyang.

46 million mobile records from Malaysia's main telecoms and network operators have been found for sale on the Dark Web. With a population of only 32 million people, concerns have been expressed that potentially every Malaysian citizen has been affected by this breach.

Saudi Arabia has created a National Authority for Cyber Security to provide safeguards for the country against emerging threats.

NATO’s Secretary General Jens Stoltenberg, has met with security experts and officials in Japan and South Korea to discuss modern security challenges and to foster greater collaboration between the alliance and Asian countries.

MEPs want human rights safeguard on tech exports

Members of the European Parliament have agreed to include a human rights safeguard clause as part of a new technology exports bill, which if passed will make it harder for companies to export digital surveillance technology to other regions.

“MEPs steering a controversial export control bill through the European Parliament have agreed to apply stricter human rights safeguards for technologies that can be used for online surveillance.”

“The European Commission proposed an update to the dual use regulation last year, which controls when companies can export products that can be used either as weapons or for civil purposes. The regulation was agreed in 2009, and the updated proposal adds new restrictions for firms that sell technology products that can be used for surveillance to countries outside the bloc.”

EU governments to warn cyber-attacks can be an act of war

A new EU framework will allow members to decipher and declare certain cyber-attacks as acts of war, justifying a response with conventional weapons.

“European Union governments will formally state that cyber-attacks can be an act of war in a show of strength to countries such as Russia and North Korea.”

“Diplomats and ambassadors in Brussels have drafted a document, obtained by The Telegraph, that represents an unprecedented deterrent aimed at countries using hackers and cyber espionage against EU members.”

Anonymous targets Spanish government sites in Catalan independence controversy

The hacking group, Anonymous have infiltrated Spain’s Ministry of Public Works and Transport targeting websites in order to show their support for the Catalan independence movement. Some sites had a, “Free Catalonia” banner added across their websites.

“Hackers from the vigilante group Anonymous targeted websites run by Spain’s Ministry of Public Works and Transport in support of the Catalan independence movement.”

“The attacks were part of an ongoing dispute that has played out both online and in the streets over Catalan’s desire for independence. Some sites were defaced to display a “Free Catalonia” slogan, while others were bombarded with DDoS attacks.”

National Audit Office

Investigation: Wannacry cyber-attack and the NHS

The National Audit Office has published a report investigating the NHS’s response to the WannaCry cyber-attack. The report concluded that the attack was, “relatively unsophisticated” but that poor management and communication within the NHS meant that the extent of damage and disruption could have been prevented.

“On Friday 12 May 2017 a computer virus, known as WannaCry, which encrypts data on infected computers and demands a ransom payment to allow users access, was released worldwide. WannaCry was the largest cyber-attack to affect the NHS in England, although individual trusts had been attacked before 12 May.”

“The National Audit Office investigation focused on the ransomware attack’s impact on the NHS and its patients; why some parts of the NHS were affected; and how the Department and NHS national bodies responded to the attack.”

North Korea blasts Britain's 'wicked' claim that Pyongyang was behind the NHS hack attack

North Korea have lambasted claims that they were responsible for the global WannaCry ransomware attack, as a gross distortion of truth. They see it as a "wicked attempt" to increase international sanctions on Pyongyang.

"North Korea has slammed Britain for accusing it of being behind a global ransomware attack that hit the National Health Service, calling the allegation a "wicked attempt" to further tighten international sanctions against Pyongyang."

"A third of Britain's public hospitals were affected by the WannaCry worm in May, according to a government report."

UK to open second investigation into Equifax breach

The Financial Conduct Authority have opened an investigation into the massive Equifax data breach, alongside an existing probe by the UK’s Information Commissioner’s Office.

"The UK Financial Conduct Authority (FCA) has opened an investigation into the massive Equifax data breach that exposed the personal information of almost 700,000 British citizens and 145.5 million worldwide."

"The FCA’s inquiry joins one already underway by the UK’s Information Commissioners Office, Bloomberg News reported, along with those being run by the U.S. Federal Trade Commission, the House of Representatives' Oversight Committee, several state attorneys and the Consumer Financial Protection Bureau."

**Dems push for program to secure internet-connected devices**

House and Senate Democrats are to introduce new legislation calling on the Department of Commerce to open a voluntary programme to evaluate and certify manufacturers products for cybersecurity credibility. The Department would also produce recommendations on cyber security benchmarks.

“Democrats are introducing legislation directing the Department of Commerce to set up a voluntary program to certify internet-connected devices with strong cybersecurity.”

“The bill, backed by Sen. Edward Markey (D-Mass.) in the Senate and Rep. Ted Lieu (D-Calif.) in the House, would set up a voluntary program in which device manufacturers can choose to have their products evaluated and certified for meeting set benchmarks on cyber and data security.”

**Cybersecurity firm builds drone-based attack platform**

Bishop Fox, a cyber research firm in Arizona have created an aerial drone which can hack into a network inside a building once the drone lands on the roof. It uses a local computer to infiltrate the building’s networks.

“An Arizona cyber research firm has developed an aerial drone that can be used to land on a roof and then hack into a network inside the building.”

“The company, Bishop Fox, said once the drone lands on the roof it is used as a “local” computer and hacks into the network, although the methodology on how this was accomplished was not discussed, according to a report by 3TV/CBS5. Once the weakness is the computer system is found the company then patches the problem.”

**Early Kaspersky count shows anti-virus not pervasive in agencies**

Following recent meetings between agencies it was announced that Kaspersky anti-virus software was not as deeply widespread in government as was feared. A Homeland Security official did not give a figure or percentage on the number of agencies using the software but stated that it was lower than 50%.

“The Homeland Security Department has not faced a deluge of Kaspersky instances as federal agencies file their first reports about how widespread the Russian anti-virus software is within government systems, a department official said Friday. Homeland Security official Michael Duffy confirmed more than half of agencies had met an Oct. 13 deadline to determine if and where the suspect anti-virus was running on their networks, but declined to offer a specific percentage.”
Senators release new election cybersecurity bill

The Senate Intelligence Committee have introduced a new Cyber Security Bill which is aimed to safeguard the election system from foreign interference, with a number of proposals, including bug bounty programs to be used to assess current defences.

“Sens. Martin Heinrich (D-N.M.) and Susan Collins (R-Maine) introduced a multifaceted election cybersecurity bill Tuesday, including a bug bounty program for systems manufacturers and a grant program for states to upgrade technology.”

"While the Intelligence Committee’s investigation is still ongoing, one thing is clear: The Russians were very active in trying to influence the 2016 election and will continue their efforts to undermine public confidence in democracies," said Collins in a statement celebrating the bill."

Tarte Cosmetics data leak: Cru3lty hackers get hold of nearly 2 million customer's data left exposed

A US based company, Tarte cosmetics has had its computers infiltrated exposing the names, addresses, emails and credit card information of nearly 2 million online customers.

“Yet another massive data leak, exposing millions of people’s personal information has come to light. Tarte Cosmetics, considered to be a cult favourite beauty brand, freely exposed nearly two million customers’ personal data to the public via two unsecured databases.”

“New York-based Tarte's cruelty-free cosmetic products are sold at major stores including Sephora and Macy's Ulta. The company also offers customers in countries where the products aren't available in stores, the option of shopping online. The data accidentally leaked affected Tarte's online customers. Sensitive data of both US and international customers, who shopped online between 2008 and 2017, was left publicly exposed via two unsecured MongoDB databases.”

Facebook rolls out new ad policy changes ahead of Russia hearings

Mark Zuckerberg has announced that he will make political ads more transparent for users, after several congressional complaints. Facebook will indicate who paid for political advertisement, and will verify whether those purchasing the ads are credible.

“Facebook on Friday unveiled changes to its advertising platform designed to protect election integrity, as the nation's top internet companies rush to show they're taking congressional complaints seriously ahead of a slew of hearings on Russian interference.”

“The new policies announced by Facebook and Twitter this week are part of a campaign to show they're capable of policing their own networks. Both companies along with Google face a grilling from lawmakers who've become convinced Silicon Valley was willfully ignorant of Russian efforts to use social media to manipulate American democracy.”

PwC: Companies are failing to prepare effectively for cyberattacks

A report by PWC into cybersecurity in Singapore has found that while companies are aware of cyber threats, they remain significantly unprepared to deal with them. 39% said that they do not have an overall information security strategy, 36% said they have no cyber security trainee programme for staff and 44% do not have a process to respond to incidents.

“Massive cybersecurity breaches have become almost commonplace, regularly grabbing headlines that alarm consumers and leaders. But for all of the attention such incidents have attracted in recent years, many organisations worldwide still struggle to comprehend and manage emerging cyber risks in an increasingly complex digital society.”

Update: Possibly everyone in Malaysia had their mobile records stolen

46 million mobile records from Malaysia’s main telecoms and network operators have been found for sale on the Dark Web. With a population of only 32 million people, concerns have been expressed that potentially every Malaysian citizen has been affected by this breach.

“In a country with a population of 32 million, 46 million subscriber records from Malaysia’s main telecoms and network operators have been found for sale on the Dark Web. This suggests everyone was affected, although that the data would also cover people with multiple mobile numbers and likely include inactive or temporary numbers used by visitors to the country.”

“Local reports say that the data – which includes user-names, prepaid and post-paid phone number, addresses, customer details and SIM card data - may have been successfully traded before it was discovered, having already been in circulation in underground forums.”

Consulate Raises Alarm On Increasing Cybercrime, Sees Losses Hit U.S.$6 Trn

Increasing cybercrime in Nigeria has worried the US Consulate. The Consulate General recently encouraged Nigerians to protect themselves against cyberattacks and to be more cautious and vigilant over possible attacks. It is estimated that the global community is set to lose nearly $6 trillion each year by 2021 due to cybercrime.

“The United States of America (USA) Consulate in Nigeria is worried about the increasing cybercrime rate in Nigeria and other part of the world. Referencing the Cybersecurity Ventures, which predicted that the global community will lose more than $6 trillion yearly by 2021, the US Consulate called for concerted efforts to clip its wing.”
