In China this week some concerns have been expressed about the increasing use of digital technology by the Chinese government, arguing that cloud technology could be used to monitor the actions of citizens.

Sri Lankan officials have announced that the ban on social media networks Facebook and WhatsApp has been lifted after it was initially blocked to stop the spread of violence.

China has announced that it will attempt to commercialise 5G mobile technology by issuing licenses to telecom carriers at the end of 2019, which will make it one of the first countries to do so.

Giovanni Buttarelli, the EU data protection supervisor has urged privacy regulators across the EU to collaborate to investigate allegations that data analytics firm Cambridge Analytica illegally used user data from internet giant Facebook to influence elections.

The European Union are set to announce a digital tax on US technology giants Facebook and Twitter this week in an attempt to crack down on large multinational companies’ tax evading.

According to the World Economic Forum the number of internet connections may reach a trillion by 2035 with billions of devices potentially vulnerable to cyber attack.

A United Advocacy group has urged the US Nuclear Regulatory Commission to immediately remove limits agreed back in 2014 which stipulate that only cyber protection safeguards can be built on nuclear systems that have a direct impact on safety.

The United States for the first time has openly blamed Russia for a cyber-attack blaming them for an attack in March 2016 which gave remote access into the US energy sector networks.
Internet giant Google has announced that it will invest three hundred million dollars over the next three years to fight fake news.

Australian Home Affairs Minister Peter Dutton warned Asia that the use of encrypted messaging apps being used to plan terrorist attacks was one of the biggest threats in modern times and called for a cohesive response across Asia.

Internet giant Google has announced a new scheme called the Google Launchpad Accelerator which will provide fifteen thousand single course scholarships and five hundred nano degree scholarships to professional developers in South Africa, Nigeria and Kenya.

Technology giant Facebook have launched ‘Facebook Lite’ which is a stripped-down version of Facebook so that developing countries that struggle with weak mobile data connections will be able to use the website.

**EU telecoms regulators examine whether app stores restrict internet access**

The European telecoms regulator will assess whether internet giant Google and Amazon’s app store conflicts with net neutrality rules by limiting users’ choice of content.

“European telecoms regulators are investigating whether app stores restrict internet access by limiting their users’ choice of content, the chair of the umbrella group of EU watchdogs said on Wednesday (14 March).”

“The regulators are starting to examine whether “the gatekeeper role of app stores” like Google and Apple’s might conflict with the EU’s law guaranteeing net neutrality, Johannes Gungl, the head of the BEREC group, said at a meeting in Brussels.”

France to get tougher on social media hate speech: PM

French Prime Minister Edouard Philippe has announced that France will get tougher on internet giants such as Facebook and Twitter to remove racist content from their online platforms.

“France will toughen rules on hate speech to ensure social media giants do more to remove racist and anti-Semitic content from internet, Prime Minister Edouard Philippe said on Monday.”

“The announcement comes as the 28 European Union countries work on rules that would compel Facebook, Twitter, Youtube and Google to be more proactive in filtering and weeding out hate speech on their platforms.”

50 million Facebook profiles harvested for Trump consultants in major data breach: Reports

It has been revealed that Cambridge Analytica, a UK data analytics firm used the information of fifty million US Facebook profiles to exploit voters with targeted advertising to influence them during the US elections.

“The data analytics firm that worked with Donald Trump’s election team and the winning Brexit campaign harvested millions of Facebook profiles of US voters, in one of the tech giant’s biggest ever data breaches, and used them to build a powerful software program to predict and influence choices at the ballot box.”

“A whistleblower has revealed to the Observer how Cambridge Analytica – a company owned by the hedge fund billionaire Robert Mercer, and headed at the time by Trump’s key adviser Steve Bannon – used personal information taken without authorisation in early 2014 to build a system that could profile individual US voters, in order to target them with personalised political advertisements.”

Kaspersky a Russian based cybersecurity provider has announced it will set up a data centre in Switzerland in a bid to win back Western Governments after allegations that its anti-virus software has been used for spying.

“Moscow-based Kaspersky Lab plans to open a data center in Switzerland to address Western government concerns that Russia exploits its anti-virus software to spy on customers, according to internal documents seen by Reuters.”

“Kaspersky is setting up the center in response to actions in the United States, Britain and Lithuania last year to stop using the company’s products, according to the documents, which were confirmed by a person with direct knowledge of the matter.”

**Cambridge Analytica accused of exploiting ethnic tensions to swing votes**

Cambridge Analytica, a data analytics company has been accused of manipulating elections, encouraging ethnic tensions and ‘demonising’ opposition candidates during the election in Kenya last year.

“From Caribbean islands to conflict zones in the Middle East, Cambridge Analytica and its parent company, SCL Group, has been accused of manipulating elections and working for leaders accused of crimes against humanity.”

“Cambridge Analytica was alleged to have stoked ethnic tensions and ‘demonised’ opposition candidates during a deadly election campaign in Kenya
last year. It helped President Kenyatta and his running mate William Ruto to win an election that was later annulled by the country’s supreme court.”

Graduate programme aimed at driving open source skills in South Africa

A new graduate programme in South Africa is attempting to address the skills shortage in the digital and technology sectors by educating students in open source skills such as cloud and application development.

“South Africa is a skills-hungry country. In fact, according to Adzuna, the rarest skills are in the digital and technology sectors, where demand is far outstripping supply – and according to SUSE – that is exactly what the industry is seeing when it comes to open source skills.”

“According to Matthew Lee, Regional Manager for SUSE Africa, “There is a massive skills gap and demand for open source skills such as cloud, application development and DevOps locally – and especially as more businesses move towards digital transformation.”

Facebook Lite to launch in developed countries, including US

Technology giant Facebook have launched ‘Facebook Lite’, a stripped-down version of Facebook for developing countries that struggle with weak mobile data connections.

“Facebook Inc on Thursday said it will roll out the stripped-down version of its social media platform, Facebook Lite, to more countries including developed ones, to attract users struggling with slower mobile data connections.”

“Facebook Lite, presently available in over 100 countries, was launched in 2015 targeting developing markets and designed to work in areas with slower or limited internet connections.”

**South Africa gets first-of-its kind ATM pharmacy**

A new ATM Pharmacy has been built in South Africa which uses cloud based electronic software and robotic technology to label and dispense medication for patients.

An ‘ATM pharmacy’ that gives patients with chronic illnesses their repeat medication has been launched in Alexandra, a township in Johannesburg, South Africa on Thursday, 15 March 2018.

“The Pharmacy Dispensing Unit (PDU) is the first of its kind in Africa and was developed by a team comprising experts from Right to Care and Right ePharmacy in collaboration with the Gauteng Department of Health. The Pharmacy Dispensing Unit (PDU) works like an ATM for medication, with Skype-like audio-visual interaction between patient and tele-pharmacists, cloud-based electronic software and robotic technology to dispense and label medication.”

**Google Launchpad Accelerator Africa kickoff**

Internet giant Google has announced a new scheme called the Google Launchpad Accelerator which will provide fifteen thousand single course
scholarships and five hundred nano degree scholarships to professional developers in South Africa, Nigeria and Kenya.

“Google has revealed the startups who will participate in the first Google Launchpad Accelerator Africa class. The event was made at an event held in Lagos, Nigeria. It also announced a partnership with Udacity and Andela to provide 15 000 single course scholarships and 500 nano degree scholarships to aspiring and professional developers across Nigeria, Kenya and South Africa.”

“Google announced the first Launchpad Accelerator Africa class on 9 November and applications closed on 10 December 2017. Launchpad Accelerator Africa, is a programme for top early-stage African startups that will operate out of Lagos, Nigeria.”
According to the World Economic Forum the number of internet connections may reach a trillion by 2035 which means billions of devices could be subjected to a cyberattack however the world is not ready.

“Last month, United Nations Secretary-General António Guterres called for global action to minimize the risk posed by electronic warfare to civilians.”

“Guterres lamented that “there is no regulatory scheme for that type of warfare,” noting that “it is not clear how the Geneva Convention or international humanitarian law applies to it.”
